

# BLOOD MEAL

## PRODUCT TECHNICAL FILE

It is a product resulting from fresh clean blood without contaminants other than those obtained involuntarily employing sound slaughter practices. The water is removed by a mechanical process and/or evaporated by cooking until reaching a semi-solid state. The semi-solid mass is transferred to a quick dryer to remove the remaining moisture.

### ◉ Description of the Product:

Blood meal.

### ◉ Physical Form presented:

Brownish-reddish powder

### ◉ Characteristics of the packaging and form of packing :

The products are bagged in raffia bags and packed on pallets in a ventilated place.

### ◉ Composition:

100% Blood.

### Assurance levels:

PROTEIN	min 80%
MOISTURE	máx 10%
DIGESTIBILITY IN PEPSIN 1:10.000 a 0,2% em HCL 0,075N	min 70%
